

Dylan Walls — Public Resume

DYLAN WALLS

AI Implementation & Operations Specialist

South Jordan, Utah

[LinkedIn](#) · [Portfolio](#) · [GitHub](#)

Active Secret Security Clearance

PROFESSIONAL SUMMARY

AI implementation and operations specialist with enterprise workforce systems experience, active Secret clearance, and hands-on experience building practical AI automation systems. Combines operational leadership supporting 430+ personnel with AI workflow automation, chatbot systems, agent orchestration, knowledge management, documentation, onboarding, and stakeholder enablement.

Experienced translating operational requirements into repeatable systems, training materials, workflows, reporting structures, and AI-enabled processes. Strong fit for AI implementation, AI operations, technical enablement, workflow automation, and AI business-systems roles requiring both business judgment and practical AI tool fluency.

CORE SKILLS

AI Implementation & Automation: AI workflow automation, agent workflows, prompt engineering, LLM evaluation, chatbot workflows, human-in-the-loop systems, RAG concepts, AI adoption, browser automation, local LLM workflows

Business Operations: Process improvement, stakeholder management, onboarding operations, training and enablement, operational reporting, workforce planning, documentation, change management, cross-functional coordination

Technical Tools: OpenAI, Claude, Hermes, OpenClaw, Python, APIs, GitHub, Telegram bots, Obsidian, Salesforce SAM models, browser automation, AI-assisted development

PROFESSIONAL EXPERIENCE

Transportation Security Administration — Operations Coordinator & Workforce Systems Lead

2024 – Present

- Coordinate workforce operations, onboarding execution, staffing strategy, and workforce systems supporting more than 430 personnel.
- Build and maintain Salesforce SAM models that support workforce planning, forecasting, operational visibility, and leadership decision-making.

- Translate operational requirements, workforce constraints, stakeholder needs, and policy requirements into scalable processes and actionable workflows.
- Develop operational reporting, workforce analytics, staffing forecasts, and performance insights for leadership teams.
- Schedule and coordinate onboarding programs while maintaining operational readiness and workforce continuity.
- Present directives, procedures, and guidance to new hires and operational teams.
- Identify workflow inefficiencies and implement process improvements that increase execution clarity, visibility, and organizational effectiveness.

Transportation Security Administration — Supervisory Transportation Security Officer

2022 – 2024

- Directed workforce deployment and operational readiness for 363 Transportation Security Officers in a mission-critical environment.
- Managed 16-lane checkpoint operations processing more than 30,000 passengers daily while maintaining wait times below 20 minutes.
- Led frontline operational decision-making, stakeholder coordination, issue resolution, and workforce execution.
- Delivered training, coaching, documentation, and operational guidance to support procedure adoption and team performance.
- Investigated operational issues, identified root causes, implemented corrective actions, and documented outcomes.

AI SYSTEMS PORTFOLIO

Outlaw Intelligence — Founder & AI Systems Builder

- Design AI-enabled workflow systems for research, lead intelligence, business analysis, reporting, and operational execution.
- Build AI agents, automation pipelines, workflow architectures, and knowledge systems using OpenAI, Claude, browser automation, APIs, and local language models.
- Develop agent workflows supporting task routing, contextual memory, review checkpoints, and bounded tool use.
- Build AI-enabled websites with LLM-powered chatbot experiences, lead capture workflows, and customer engagement systems.
- Design Obsidian-based knowledge environments supporting documentation, project tracking, and retrieval workflows.
- Implement Telegram-based command and monitoring workflows for remote interaction with agent systems.
- Label portfolio work clearly as prototype, internal system, or customer-facing artifact; do not expose sensitive employer information.

Selected systems: agent workflow orchestration · AI customer interaction systems · knowledge and remote operations

ADDITIONAL INFORMATION

- Active Secret Security Clearance

- Experience operating in mission-critical environments requiring accountability, reliability, and trust
- Strong documentation, training, onboarding, and stakeholder communication background
- Focused on practical AI implementation, workflow automation, organizational adoption, and AI-enabled business systems
